

Customers & sites

Create customers in Admin, add physical sites, and understand how they connect to projects and field work.

Step 1

Overview — why customers and sites matter

Every external project is tied to a **customer** and usually a **site** (physical location). Customers hold identity (name, industry, logo); sites hold location and contact details used on reports and in the field.

Customer → Site(s) → Project → Assets / Inspections

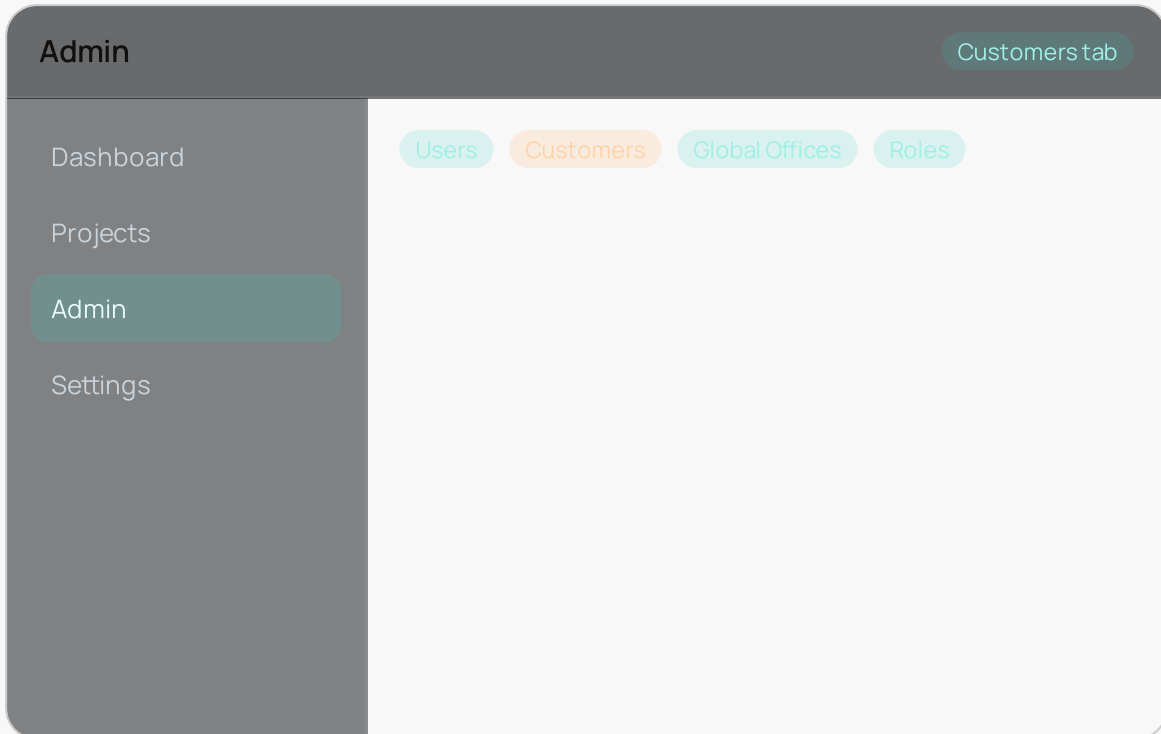

- **Admin** → **Customers** — manage customer records and navigate to sites.
- **Cards view** — one card per customer; flip to edit; *View Sites* opens the sites page.
- **Table view** — site-centric rows; useful when you manage many locations across customers.

Sites are optional on a project (*No site*), but linking a site auto-fills location context on reports and helps field teams find the right address.

Step 2

Navigate to Admin → Customers

1. Sign in as an admin or user with customer-management permissions.
2. Open the sidebar and choose **Admin**.
3. Select the **Customers** tab (URL: /admin?tab=customers).
4. Toggle between **Cards** and **Table** view as needed.

Step 3

Create a customer

1. In Cards view, click **New Client**.
2. A new customer card appears with an auto-generated ID (format CUST-...).
3. The card flips to edit mode – enter the customer name and industry.
4. Click **Save** to persist.

Customers – Cards

New customer card (edit mode)

Customer Name

Acme Mining Corp

Customer ID

CUST-0042

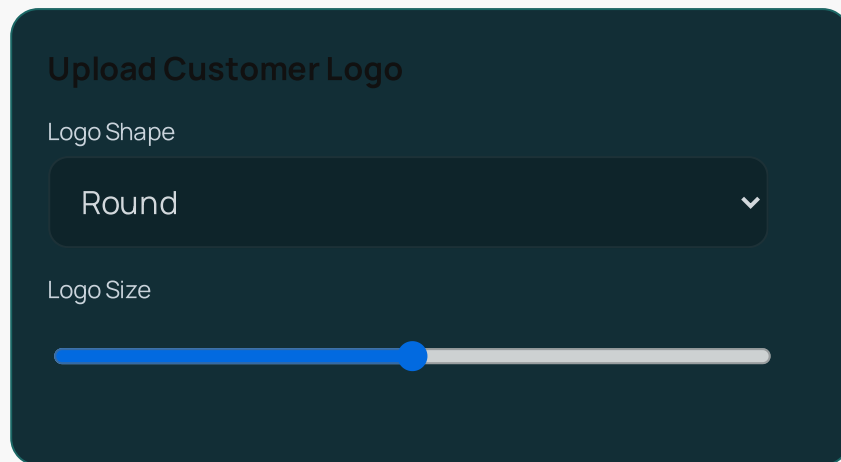

Industry

Mining

Step 4

Edit customer details & upload logo

1. On a customer card, use the edit control to flip the card.
2. Update **Customer Name** and **Industry** as needed.
3. Click the logo area to open **Upload Customer Logo**.
4. Choose shape (*No Shape*, *Round*, *Rectangular*) and adjust size sliders.
5. Upload an image and click **Save**.

The screenshot shows a dark-themed dialog box titled "Upload Customer Logo". Inside the dialog, there are two controls: a "Logo Shape" dropdown menu currently set to "Round" with a downward arrow, and a "Logo Size" slider. The slider has a blue track and a blue knob positioned approximately one-third of the way from the left.

Step 5

Add sites for a customer

1. From a customer card, click **View Sites (N)** — opens `/admin/customers/:id/sites`.
2. Page title: *Sites - {customer name}*; subtitle explains physical locations.
3. Click **Add New Site**.
4. Fill **Site Name**, **City**, **State**, **Country**, and contact fields.
5. Click **Save** on the site card.

Alternative: in Admin **Table** view, use **New Site** to add a site row and pick the customer from the dropdown.

Site card

Site Name

North Pit

City

Brisbane

State

QLD

Country

Australia

Contact Name

Jane Smith

Step 6

How customers & sites link to projects

When you create a project (see [Projects guide](#)), the **Customer** dropdown lists all customers. Selecting a customer auto-fills **Customer ID** and filters the **Site** dropdown to that customer's locations.

- Site format in the project form: {Customer} - {Site Name}
- Choosing a site can auto-switch the customer if you picked the site first.
- If no site exists yet, choose *(No site)* and add the site in Admin later.

Admin: Customer

Admin: Site

Project form: Customer + Site
