

Workflows & builder

Author work instructions, configure mandatory photos, team selects, and feature capture – then publish to the field.

Step 1

How workflows connect to the catalog and projects

- Sidebar label: **Workflows** – route `/work-instructions`.
- One product tab per catalog product; workflows are scoped to that product.
- **Workflow Type** (from Settings) labels each config – Installation, Inspection, etc.
- **Features** linked to the product drive installed-feature quantities and BOM in the builder.
- **Project team members** nominated on the project populate *User select* inputs at run time.

Step 2

Create a new workflow

1. Open **Workflows** → select a product tab (e.g. HA-Coal Controller).
2. Click + **New Workflow**.
3. Enter **Workflow Name**, **Workflow Type**, **Description**.
4. Set **Installed Features** quantities (0 = not included).
5. Click **Create Draft** — status **Draft**.
6. Open **Builder** from the list row to add steps.

Workflows — HA-Coal Controller

List

Builder

New Workflow

Workflow Name

HA-Coal Zone Install

Workflow Type

Installation

Description

Standard zone controller installation

Installed Features: Zone Controller ×1, RF Antenna ×2

Step 3

Builder — add and configure steps

Builder toolbar: **New Workflow**, **Run** (preview), **Publish**, Export/Import JSON, **Reset**.

Step types (when adding a step):

Preparation / Permits

Installation

Data Collection

Test & Acceptance

Final Inspection

Return to Service

Custom

Each step has sub-tabs: **Decisions**, **Inputs**, **Content**, **Capture**.

Builder — HA-Coal Zone Install

Saved · 4 steps

Steps

1. Site prep

2. Mount
controller

3. RF antenna
install

4. Final test

Inputs

Content

Capture

Add inputs: Text, Number, Choice, Checkbox, Photo, Video, Signature, Note, **User select (project team)**.

Step 4

Photos — mandatory vs optional

There are two distinct photo mechanisms:

Mechanism	Where	Required?
Photo capture input	Inputs tab → type Photo	Per-input toggle: Required / Optional
Reference media	Content tab → Media library	Reference only — not validated at run time
Capture fields	Capture tab (structured as-built)	Separate Required/Optional toggle per field

Add an input — Photo capture

Required

Required

Add an input — Photo capture

Label

Additional context photo

Required

Optional

At run time, missing required photos show *Photo missing*, *Review Missing Photos*, and *Add Missing Photos*.

Step 5

User select — project team members

1. On the project form, nominate users under **Project Team Members** (see Projects guide).
2. In the builder, add input type **User select (project team)**.
3. Default labels vary by workflow type: *Installed By* (install), *Inspected By* (inspect), or *Team Member*.
4. At run time, dropdown lists only nominated team members; falls back to all users if empty.
5. Set Required/Optional like any other input.

Input — User select (project team)

Required

Runner options from project team: Alex Technician, Sam Inspector

Step 6

Features, quantities & BOM

Three layers connect features to a workflow run:

1. **Catalog** – features linked to product in Settings → Products.
2. **Workflow create / Installed Features panel** – set quantity per feature (0 = excluded).
3. **Builder tabs** – *Features (N)* and *BOM (N)* for dependency inclusion per step.

Installed Features

Feature	Qty
Zone Controller Module	1
RF Antenna	2
Power Supply	1

Preview

BOM (5)

Features (3)

Step 7

Publish and assign to assets

1. In Builder, click **Publish** → confirm name, type, and description.
2. Published workflows are **locked** and assignable to project assets.
3. Status changes from **Draft** to **Published**.
4. From project detail, assign the published workflow to an asset; field users run it from the mobile or web runner.
5. Use **Run** in builder to preview before publishing.
