

Installer Field Guide

How to find your jobs, open assets, take over work when needed, and complete a workflow from start to sign-off.

Strata N-Go · Field operations · For Installer role

1. Sign in

Open the app in your browser or on your phone. Enter the email and password your project manager gave you, then tap **Sign in**.

After first login you may see a welcome tour – tap **Skip for now** to go straight to your dashboard.

2. Your home base — the Dashboard

Installers land on the **Dashboard** (/). Your main tab is **My Installs** – this shows work assigned to you, not the whole company.

Dashboard → My Installs tab

My Jobs Today

This is your daily work list – assets assigned to you, sorted by recent activity. Each card shows:

- **Asset tag** and job number
- **Status** – e.g. Not Started, In Progress, Paused, Pending sign
- **Progress** – step completion percentage
- A primary action button – **Start Run**, **Continue Run**, **Resume Run**, **Add Missing Photos**, or **Installer Sign-off**

My Jobs Today — tap a card or its action button to open the asset or workflow

Tip: Tap **+N more** — **view all** at the bottom of My Jobs Today to open the full **Project Assets** page filtered to your work.

Other dashboard sections

Section	What it means
Runs Missing Media	Completed runs that still need photos — tap Add Missing Photos
My Pending Signatures	Field work done — you still need to sign off
My Blocking Issues	Issues you must resolve before the run can be locked
Job History	Finished or closed jobs that were assigned to you

3. Project Assets page

Open **Assets** in the sidebar (route: `/installations/assets`). Page title: **Project Assets**.

- Pick a **project** from the job dropdown (or **All projects**)
- On phone: toggle **My Assets** to see only your assignments
- Use **Status** filters — Not Started, In Progress, Paused, Pending, Complete, etc.
- Search by asset tag, serial number, or installer name

Project Assets — find your asset and use the row action (Start Run, Continue Run, ...)

The **Assigned Tech** column shows who owns the job. Your name should appear on assets assigned to you.

4. Taking over someone else's asset

There is no separate “Take over” menu. You take over work by starting or continuing a workflow on an asset that is **unassigned** or **assigned to another person**.

- 1 Find the asset on the Dashboard or Project Assets page.
- 2 Tap **Start Run**, **Continue Run**, or **Resume Run**.
- 3 A confirmation dialog appears:
 - 4 **Unassigned asset** — the app assigns it to you and notifies the project manager.
 - 5 **Asset assigned to someone else** — you confirm reassignment to yourself.
- 6 Tap **Assign to me & Start** (Assets page) or **Continue** (Dashboard).
- 7 The workflow runner opens — you can begin field work.

Confirm takeover — asset is reassigned to you before the run starts

Important: You can only assign an asset *to yourself*. You cannot assign work to a colleague — that is done by a Project Manager or Admin.

5. Workflow journey — start to sign-off

Every installation or inspection follows the same high-level path:

Step A — Setup

After you start a run, the runner shows **Run workflow** with the asset ID, workflow name, and step count. Tap **Start** → (or **Continue** → if resuming).

Run workflow setup — review details, then Start

Step B — Complete each workflow step

Work through steps one at a time. For each step you may need to:

- Fill in text, numbers, or choices
- Take **required photos** (marked mandatory — you cannot finish without them)
- Select your name from **Installed By** / team dropdowns
- View reference photos or videos attached by the office (tap thumbnails in **Content**)

Use **Next step** → to advance. On the last step, tap **Complete**. You can **Pause** anytime and **Resume Run** later from the dashboard.

In-progress step — complete fields and photos, then Next step

Step C — Summary and lock the run

When all steps are done, you see **Workflow complete**. Review:

- Steps completed count
- Any **missing photos** or **blocking issues**
- Recorded time (use **Adjust time** if needed)

Fix blockers with **Add Missing Photos** or **Resolve Blocking Issue(s)**. When everything is clear, tap **Lock run**.

Locking saves the run permanently — after you sign, you cannot edit captured data (PM/Admin can until customer sign-off).

Summary screen — resolve missing items, then Lock run

Step D — Installer sign-off

After locking (or from **Installer Sign-off** on the dashboard), complete **Field sign-off**:

- **Your name** (required)
- **Outcome** — Completed, or Conditional
- **Signature** (optional draw)
- **Notes** (optional)
- Check the confirmation box that time and captured data are correct

Tap **Sign & continue**. The run moves to customer sign-off (often collected on site or via email link from the PM).

Field sign-off – confirm your work is complete and accurate

6. Quick reference — button labels

When you see...	Do this
Start Run	Begin a new workflow on this asset
Continue Run	Return to an in-progress run
Resume Run	Continue after a pause
Add Missing Photos	Upload photos required before lock/sign
Resolve Blocking Issue	Fix a blocking issue on the asset
Installer Sign-off	Sign after field work is complete
Lock run	Finalize the workflow run on the summary screen

7. Getting help

- **Tips & Tricks** (sidebar) – short guides and videos for products on site
- **Documents** – project library files
- **Issues Board** – report and track site issues
- Contact your **Project Manager** if an asset or workflow is missing
